## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, drawn to a method and processor for transferring data depending on predetermined addresses values using a translation table, classified in class 711, subclasses 202 and 206.
  - II. Claims 9-30, drawn to a method and processing unit for transferring data performed by combining a base address with first and second addresses, and accessing memory depending on an address comparison, classified in class 711, subclass 220.
  - III. Claims 31-56 and 63-64, drawn to a method and processing unit used to determine a caching location based on distinct modes of operation, classified in class 711, subclass 118.
  - IV. Claims 57-62, drawn to control logic used for address detection to determine the when to write to a memory, classified in class 711, subclass 202.
2. The inventions are distinct, each from the other because of the following reasons: Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility from inventions II-IV such as use in a system employing address translation to transfer data by comparing to predetermined addresses. Invention II has separate utility from

inventions I, and III-IV such as use in a system employing address combining (such as base address with an offset) to access data. Invention III has separate utility from inventions I-II, IV such as use in a system to determine a location to cache data.

Finally, invention IV has separate utility from inventions I-III such as use in a system for address detection to determine the when to write to a memory.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. See MPEP § 806.05(d).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. A telephone call was made to Applicant (Mr. George Yee) on 23 January 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.
